

Det här är den informationen som jag lyckats samla ihop gällande Arbcore!

Tradingen på Arbcore stannade upp helt när flera kryptobörser frös (låste) pengarna som Arbcore använde för sin arbitrage handel. Så Arbcore hade inget annat val än att stoppa allt. Sedan har man under flera veckor jobbat för att ta fram en ny lösning och en ny plattform. Den nya plattformen heter One Trade. Det är från den plattformen som man nu kommer att jobba vidare ifrån.

Du har nu 2st valmöjligheter gällande din framtid med One Trade.

1: Fortsätta jobba vidare med One Trade

2: Avsluta helt.

Men här gäller det att veta att det kommer ta lång tid innan du kommer kunna få igen dina pengar, det vill säga om du avslutar helt.

I denna information har jag lagt med text på engelska som jag fått skickat till mig, jag förmedlar bara vidare denna information.

Börja titta på den här videon, den ger dig tydlig information om vad det också skulle innebära att fortsätta jobba vidare med One Trade.

<https://www.youtube.com/watch?v=FMV58fMrWWk>

Enligt informationen från den här videon så migreras information/data nu över från Arbcore (för de som väljer att stanna kvar) till nya One Trade.

Målet är sedan att arbitrage-tradingen ska kunna starta igen någon gång nästa vecka.

*** Så här har jag gjort så här långt.**

För det första har jag redan fått igen de pengar jag satsade i Arbcore, vilket verkar fallet för över 70% av användarna inom Arbcore.

För mig att ens försöka välja alternativ 2 (avsluta) var alltså ingen mening.

Jag valde att alternativ 1, att fortsätta jobba vidare med One Trade.

Så min information är nu överflyttad till den nya plattformen, men allt är inte klart ännu ser jag.

Jag har \$700 som nu ligger som "frozen capital" inne på One Trade.

Som förklarar videon så behöver jag gå in med nytt kapital för att få igång inkomsterna igen från de redan \$700 som jag redan har inne på plattformen.

Allt finns förklarat i detalj i videon.

Krångligt?

Ja, jag tycker det lät lite krångligt...

Men jag delar med mig av den informationen jag fått.

Däremot har jag ännu bestämt mig hur jag vill gå vidare kring One Trade.

För INSTRUKTIONER om hur du flyttar från Arbcore till One Trade, se längre ned på den här sidan.

Vad du än beslutar dig för, du behöver bestämma dig först för alternativ 1 eller 2.

MAY 25 ARBCORE / ONE TRADE MEETING SUMMARY

Today's meeting focused on the official transition from ArbCore into the new One Trade ecosystem, including how balances, accounts, contracts, exchanges, and future operations will function moving forward. Leadership emphasized that the infrastructure is already built, exchanges are prepared, and the company is now entering a new phase focused on

scalability, legal structure, and long-term operations.

ONE TRADE WEBSITE IS NOW LIVE: One Trade Login Portal **TWO OPTIONS FOR ALL USERS**

Leadership confirmed that every user will now choose between:

- 1: CONTINUE WORKING
- 2: TERMINATE CONTRACT

Users who continue working will receive access to the new One Trade platform, Telegram mini app, updated exchange systems, and future arbitrage operations. Users who terminate contracts will permanently leave the structure and platform. Leadership stated that once “Finish Work” is selected, accounts will be blocked and cannot rejoin under the same structure later.

BALANCE & RECALCULATION DETAILS

The company explained that all balances across different cryptocurrencies will be recalculated into USDT based on current exchange rates. From this total balance, the following will be deducted: • Previous payouts received • Affiliate commissions • Network cashback rewards The remaining amount becomes the official balance moving into the new system.

Leadership also stated that:  72.3% of users have already reached breakeven or profit. Because of this, they explained there would be little reason for many users to terminate contracts since terminated balances would effectively go to zero.

PRIORITY PAYMENTS FOR RECENT DEPOSITS

The company stated that users who joined closest to the shutdown/event period — approximately the last 28% of participants — will be prioritized first for compensation payments under the termination process. Leadership emphasized that compensation payments would happen gradually over time as remaining company assets continue generating revenue.

ONE TRADE PLATFORM & EXCHANGES

Leadership showcased the new One Trade backoffice and Telegram mini app, explaining that the entire platform has been redesigned. Major updates include: Internal support system Multiple mirror domains Expanded security systems Built-in documentation center Exchange integration visibility Live arbitrage tracking Multi-language support (20 languages at launch)

The company also stated that they are transitioning away from relying on outside exchanges and are now building their own exchange ecosystem.

ARBITRAGE & TRADING OPERATIONS

Leadership confirmed that arbitrage operations are continuing. Initial trading pairs at launch: • USDT / BTC • USDT / ETH • USDT / XRP They stated these pairs were selected because they currently provide the strongest arbitrage spreads.

Users will reportedly be able to: View trades Monitor exchange activity Track volumes Review transaction/hash information See exchange-side execution directly from the cabinet Leadership emphasized that transparency tools and proof systems will now be much

more visible than before.

ARB GROUP & LEGAL STRUCTURE

A major topic was the formation of ARB Group, described as the parent company that will oversee: • Exchanges • Arbitrage systems • Social trading bots • Future fintech products • Partnership infrastructure Leadership stated that: ✓ Licenses are now visible ✓ Documentation is publicly accessible ✓ Company names now match domains ✓ Contracts and exchange agreements are completed The roadmap reportedly includes adding one exchange per month, with a long-term goal of operating up to 16 exchanges globally.

Instruktioner

STEP 1) CLEAR YOUR BROWSER HISTORY & COOKIES

Eller logga in från en annan webbläsare än du tidigare använt dig av.

Men du måste manuellt lägga in dina inloggningsuppgifter!

STEP 2) Log into your old Arbcore backoffice ~ <https://arbcore.app/login>

STEP 3) Choose either Continue working or terminate contract

STEP 4) You'll be prompted to log into your new One Trade backoffice IMPORTANT.. Make sure you PHYSICALLY type in your email address and password, Do NOT copy n paste from saved info

STEP 5) You're all set!!

Video 1: Det här är en ny presentation helt fokuserad på One Trade från Alex Villa:

Senaste informationen hämtad från denna Telegram-grupp:

ONE TRADE CHANNEL

Website & Backoffice

- * Basics are online: Deposits and withdrawals as well as data management are working flawlessly.
- * Ongoing updates: New updates are being deployed every half hour. This process is expected to continue until Friday, when the backoffice will be gradually fully activated.
- * Important: ArbCore and OnTrade are now running on completely separate servers with their own licenses. Therefore, all users must accept the new Terms of Service on the website.

Technical Details (Deposits & Withdrawals)

- * Minimum deposit: To fully accept the trading terms and activate the backoffice, a deposit of at least 100 USDT is required.
No time pressure: There is *no time limit for this activation. However, those who want to participate in the first calculations/distributions from Friday should do so promptly.
- * Networks: Deposits in USDT are possible via various networks (including TON, BSC, ERC20, Polygon). Everything is internally converted into dollars.
- *  **IMPORTANT FOR TON PAYMENTS:** For transactions via the TON network, the Memo (Tag) must be specified! Without the Memo, the system cannot automatically assign the payment (the support team has no capacity for manual blockchain searches).
- * 2FA (Two-Factor Authentication): Must be re-set for OnTrade, as withdrawals are not possible without it.
- * Return: Contracts run at 200% (100% capital + 100% profit). The return is market-dependent (recently often over 1% per day).

Data Retrieval & Multi-Accounts

- * This is not a classic KYC, but a formal deposit of correct data (important, among other things, for proper invoices/taxes).
- * The data will only be checked in more detail by the company if there is a concrete suspicion of multi-accounts (unauthorized stacking of multiple accounts).

Options for Frozen Funds

The company is providing 1.5 million dollars of private capital to help the community with the "unfreezing". There are the following options:

* Option A (Wait): Do nothing and deposit nothing. There is no time limit, you can wait as long as you want.

Option B (Partial Deposit): Deposit an amount and the company will add a proportion of the old capital on top, so that this can work in the pool. (Example: Anyone who deposits 10% of the old volume will get a corresponding additional 10% of the capital unlocked).*

* Option C (Distribution/Network): If partners in the first line (Firstline) make deposits, this will also be counted for their own account as if they had deposited themselves.

* The remaining distribution: A deadline for voting in the old backoffice runs until Friday. The remaining balance of the 1.5 million dollars will be distributed proportionally to all who have accepted the Terms of Service and activated their account with the 100 USDT. (The leaders are waiving commissions for the time being to fill the pool faster).
